

Breathing Apparatus Use

MSAPMOHS216A- Operate Breathing Apparatus

Course Overview

Through the combination of theory and practical training, this course provides participants with the necessary knowledge and skills required to safely use and operate and maintain breathing apparatus (open circuit) in an irrespirable atmosphere.

Course Outline

- Course introduction and enrolment
- Reference documents / legislation
- When is breathing protection required?
- Risk management concepts / risk assessments
- Human breathing principles
- Types of breathing apparatus
- Understanding the role and functions of key components of SCBA
- Calculating cylinder duration
- Using a breathing apparatus control board
- Pre-use & pre-operational checks
- Practical exercises performed
- Assessment of students' competence

Outcome

Upon successful completion of this course, each participant will receive a nationally recognised Statement of Attainment

Duration

1 day with a maximum number of 8 participants

Location

The training is conducted at WPTC facilities located in Arndell Park.

Training can also be conducted on site with the following requirements:

- Suitable training room equipped with tables, chairs and whiteboard
- All confined space equipment including gas detection instruments and Breathing Apparatus as used on site
- Suitable Confined Space scenario for practical exercises

Investment

\$295.00 per person on public courses (GST Exempt).

*For costing relevant to onsite or group training please phone 02 9622 6060.
